~R10 / learner / month

MySentinel — NFC-badge learner check-in & school-safety for South African schools. · Chain-owner doc suite · 2026-06-27

MySentinel — one-page leave-behind

MySentinel — one-page leave-behind

Gate-to-guardian school safety — one platform, every campus. NFC check-in · immutable records · real-time dashboards · push-first guardian alerts · POPIA-ready · English / Afrikaans / isiZulu.

What it is

A learner taps a badge at the gate. In about a second MySentinel confirms the check in or check out, records it immutably, updates a live dashboard and attendance, and notifies every verified guardian — push first, then email, WhatsApp, SMS. Every campus carries **its own brand and runs in its parents' language**. Built entirely on Cloudflare, so there are no servers to run.

Why a school group buys it

Your problem	What MySentinel does
"Who is on-site right now?" — unanswerable across campuses	Real-time, answer-first dashboards per school + a platform health view across all of them
Anxious parents, inconsistent communication	One push-first guardian channel, the same everywhere, with channel honesty — never a fake "delivered"
Standing up a new campus is slow and manual	Onboard a school in minutes through a durable workflow — no SQL, no IT project
POPIA exposure on learner & guardian data	Per-school encryption, subject-access + erasure flows, role-based access, passkey step-up, an append-only audit trail
Paper gate logs, no record when it matters	Every gate event is an immutable, time-stamped record

The proof (not slideware)

Verified working end-to-end: the **NFC gate tap** on a phone, **web push** on a real device, **offline-then-sent** at a flaky-signal gate, **WhatsApp + SMS** delivery, **branded PDF** exports, and **cross-campus health** across multiple live schools. Tenant isolation, passkey step-up, and trilingual UI all hold under inspection.

Honest about the road ahead

A group-scoped **owner login** (see only *your* campuses) and **multi-region scale-out** are on the near roadmap — we say so plainly, because earning trust across your parent base is the whole product. Today you operate the group from one console and pilot per campus.

The economics

- **~R10 per learner per month** (negotiable at group scale). Predictable, headcount-based — no per-message surprises.
- App push + email included. WhatsApp / SMS are bring-your-own provider or pass-through at cost.
- A built-in **billable-learner report** makes invoicing one click.

The ask

Pilot 2–3 schools in your group. We onboard them live, your officers scan from day one, your parents feel the difference in a week — then we scale to the rest of the group.
